

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

EDITOR'S NOTES	212

SOME WESTERN SPECIMENS.

A. P. MORGAN.

The following rarities occurred in a package of specimens from W. B. Anderson, Cumberland, B. C.

1. *Dothidea wittrockii* Eriksson, Fung. Scand. No. 40. *Phyllachora wittrockii* Saccardo, Sylloge II, 601.

This fungus grows at the extremities of the branches of *Linnaea borealis*. It has been found in the White Mountains. See article by Dr. Farlow in *Appalachia*, Vol. III, 247. These specimens however, were infertile. The specimens from British Columbia are well matured, affording both spores and asci.

2. *Cylindrodendrum album* Bonorden, Handbuch, p. 98, Fig. 127.

A curious white mould, *Hyphomyces*. I do not know that it has been found in this country before.

3. *Dianema corticatum* Lister, Mycetozoa, p. 205.

A *Myxomyces*, close akin to species of *Perichaena*. Lister's specimen was found in Norway. *Dianema harveyi* Rex, the type species of the genus was found in Maine. All the species appear to be very rare.
